- Sepia
- Backdrop Blur
- Backdrop Brightness
- Backdrop Contrast
- Backdrop Grayscale
- Backdrop Hue Rotate
- Backdrop Invert
- Backdrop Opacity
- Backdrop Saturate
- Backdrop Sepia

Tables

- Border Collapse
- Border Spacing
- Table Layout
- Caption Side

Transitions & Animation

- Transition Property
- Transition Duration
- Transition Timing Function
- Transition Delay
- Animation

Transforms

- Scale
- Rotate
- Translate
- Skew
- Transform Origin

Interactivity

- Accent Color
- Appearance
- Cursor
- Caret Color
- Pointer Events
- Resize
- Scroll Behavior
- Scroll Margin
- Scroll Padding
- Scroll Snap Align
- Scroll Snap Stop

- Scroll Snap Type
- Touch Action
- User Select
- Will Change

SVG

- <u>Fill</u>
- Stroke
- Stroke Width

Accessibility

- Screen Readers
- Forced Color Adjust

Official Plugins

- Typography
- Forms
- Aspect Ratio
- Container Queries

Layout

Object Fit

Utilities for controlling how a replaced element's content should be resized.

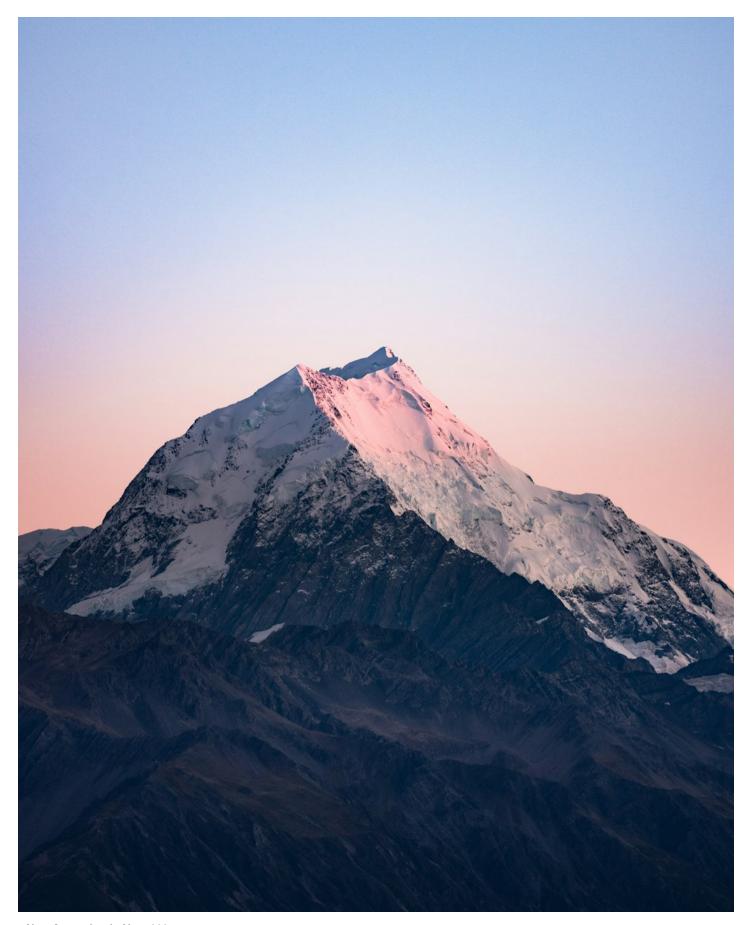

■Quick reference

ClassPropertiesobject-containobject-fit: contain;object-coverobject-fit: cover;object-fillobject-fit: fill;object-noneobject-fit: none;object-scale-downobject-fit: scale-down;

■Basic usage

■Resizing to cover a container

Use the ${\tt object-cover}$ utility to resize an element's content to cover its container.

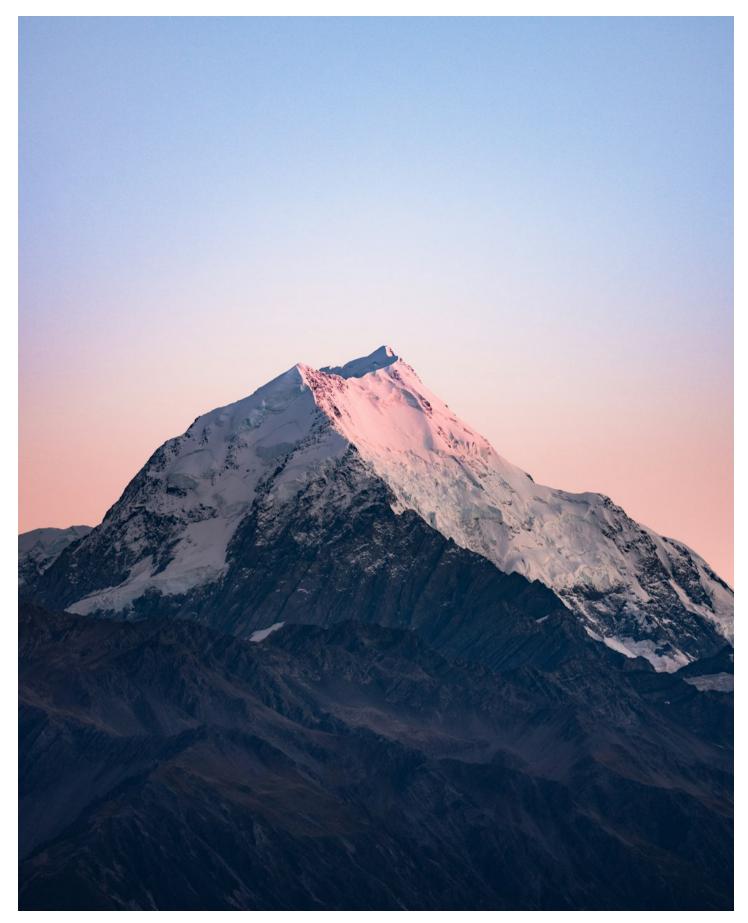

<div class="bg-indigo-300 ...">

</div>

■Containing an element

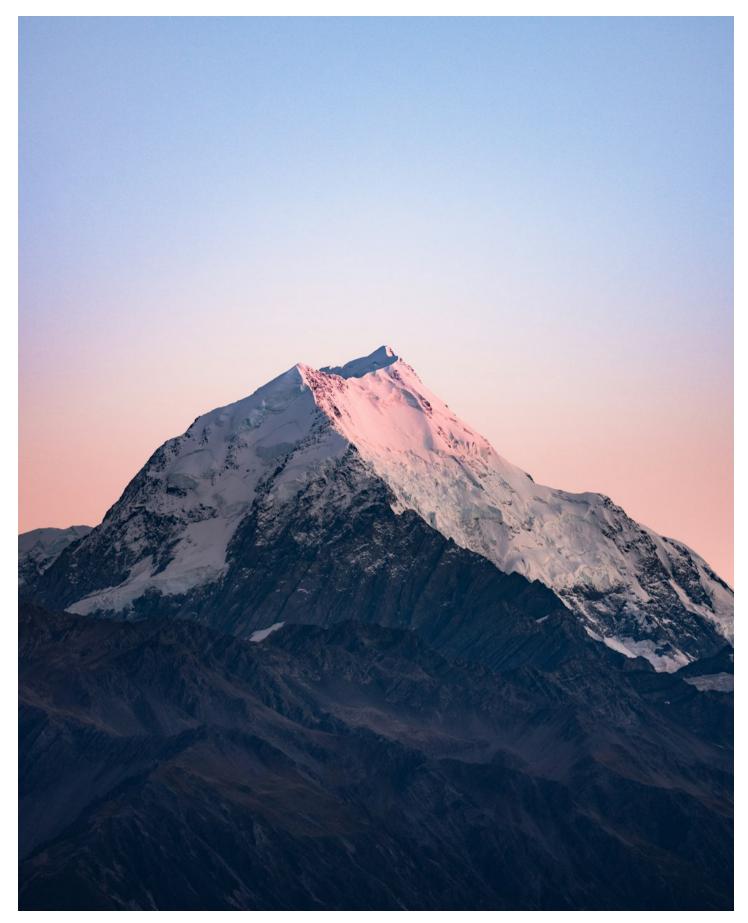

Use the ${\tt object-contain}$ utility to resize an element's content to stay contained within its container.

```
<div class="bg-purple-300 ...">
<img class="object-contain h-48 w-96 ...">
</div>
```

■Stretching to fit a container

Use the ${\tt object-fill}$ utility to stretch an element's content to fit its container.

<div class="bg-sky-300 ...">

</div>

■Scaling down if too large

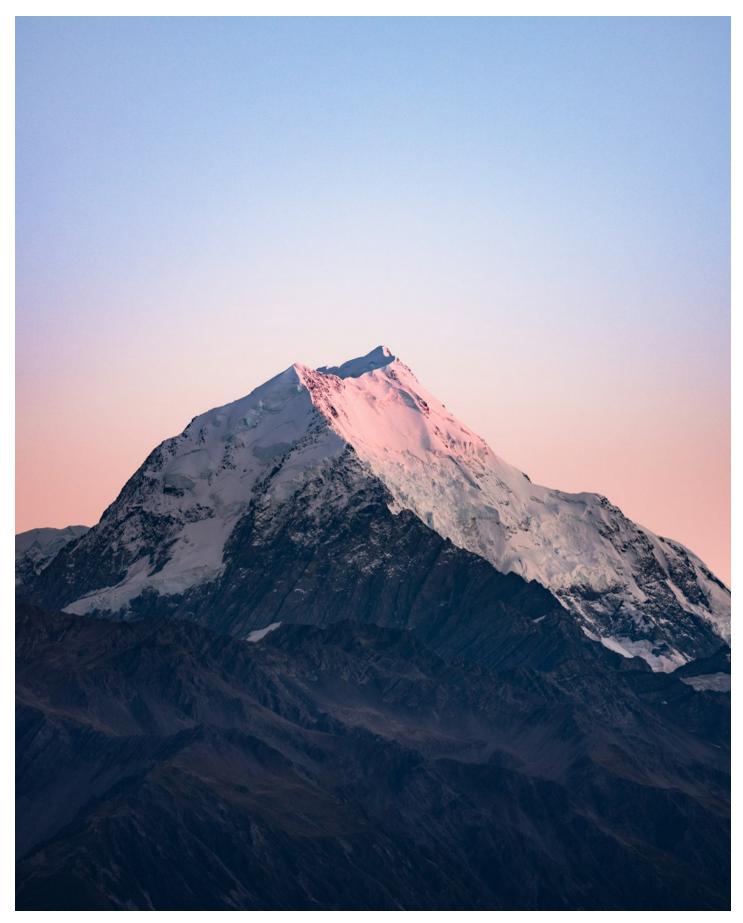

Use the object-scale-down utility to display an element's content at its original size but scale it down to fit its container if necessary.

```
<div class="bg-cyan-300">
<img class="object-scale-down h-48 w-96 ...">
</div>
```

■Using an element's original size

Use the ${\tt object-none}$ utility to display an element's content at its original size ignoring the container size.

<div class="bg-yellow-300">

</div>

■Applying conditionally

■Hover, focus, and other states

Tailwind lets you conditionally apply utility classes in different states using variant modifiers. For example, use hover:object-scale-down to only apply the object-scale-down utility on hover.

For a complete list of all available state modifiers, check out the Hover, Focus, & Other States documentation.

■Breakpoints and media queries

You can also use variant modifiers to target media queries like responsive breakpoints, dark mode, prefers-reduced-motion, and more. For example, use md:object-scale-down to apply the object-scale-down utility at only medium screen sizes and above.

To learn more, check out the documentation on Responsive Design, Dark Mode and other media query modifiers.
